PROFESSIONAL SUMMARY

Senior Software Developer with 7+ years of experience in Native Android (Kotlin, Jetpack Compose) and Flutter (Dart) development, currently building core modules of a self-service kiosk and display platform used across 400+ enterprise sites in 14+ countries for Compass Group. Contributed to a native-to-Flutter migration that cut maintenance overhead by roughly 40%. Comfortable working close to hardware — IoT integrations, thermal printers, barcode scanners — and with payment gateway SDKs (FreedomPay, Pine Labs, Razorpay) and real-time Firebase-backed UI. Also builds and ships independent side projects to stay current, including offline AI tooling and on-device ML.

TECHNICAL SKILLS

Languages: Kotlin, Dart, Java, Python, JavaScript, HTML, CSS, Swift

Mobile Frameworks: Android SDK, Jetpack Compose, Flutter, Java Android

Platforms: Android, iOS, Android TV, macOS, Web

Architecture & Patterns: Clean Architecture, MVVM, MVI, BLoC, Provider, Dagger Hilt, Repository Pattern, TDD/BDD, Kotlin Flow, Coroutines

IoT & Hardware: Sunmi SDK, Zebra SDK, Bixolon, Thermal ESC/POS Printers, Barcode/QR Scanners, BLE/Bluetooth

Payments: FreedomPay, Pine Labs, Razorpay

AI/ML: LiteRT (TFLite), Google AI Edge, ML Kit, CameraX, Ollama (RAG), Local LLMs, Piper TTS, FAISS

Backend & Cloud: Firebase (Firestore, Realtime DB, Auth), REST APIs (Retrofit, Volley, Dio), Room, SQLite

DevOps & Tools: Git, GitHub, CI/CD, Gradle, Cursor IDE, Android Studio, Xcode

PROFESSIONAL EXPERIENCE

Senior Software Developer

May 2022 – Present

SmartQ (Bottle Lab Technology Pvt Ltd) — Bengaluru, India | Technology arm of Compass Group

- Part of the team building and maintaining a self-service kiosk platform live across 400+ enterprise sites in 14+ countries (UK, Ireland, and more) for Compass Group cafeteria operations.
- Built Token Display System (TDS): a Flutter app showing live order status (Preparing / Ready) using Firebase Realtime DB, with multi-restaurant aggregated views and an idle-time promotional media rotation (video, GIF, Lottie).
- Built Intelligent Menu Display (IMD): a large-format live menu screen syncing item availability, pricing, and tax in real time from a menu API and Firebase, reusing the media/banner engine from TDS for ads.
- Worked on payment gateway integrations (FreedomPay, Pine Labs) for contactless, card, and QR-based transactions, and integrated thermal printers (Sunmi, Zebra, Bixolon) and barcode/QR scanners via ESC/POS command handling.
- Contributed to store closure automation logic and tax calculation handling for multi-region compliance across the countries the platform serves.
- Was part of the effort to migrate portions of the legacy Native Kotlin codebase to Flutter; the migration reduced maintenance overhead by roughly 40% for the modules affected.

Software Engineer

August 2021 – April 2022

Cognitive Cloud Pvt Ltd — Bengaluru, India

- Developed secure, HIPAA-compliant Android mobile applications with robust local data encryption and high-concurrency threading for real-time patient vitals processing.
- Implemented TDD protocols with JUnit and Mockito test suites; achieved 25% reduction in post-launch crash rates.
- Conducted code reviews and enforced strict data integrity standards for sensitive healthcare data handling.

Software Engineer

January 2019 – July 2021

- Built Aislyn Learn App: native Android edtech platform with 15+ paid course tracks, Razorpay payment checkout, Google Sign-In, ExoPlayer video streaming, and Volley-backed PHP REST APIs.
- Developed Dementia Care Companion (Aumetra): Flutter app polling remote vitals (SpO2, BP) every 10 seconds via IoT health APIs, with condition-aware therapeutic audio and local SQLite authentication.
- Engineered QR Smart Parking: native Android Java app with ZXing QR scanner, 4 live slot tracking (10s auto-refresh), prepaid wallet, and Retrofit API services.
- Designed and deployed Gurushree Hospital responsive multi-page website using HTML/CSS/JS with team search engine and full mobile-first layout.
- Developed Android applications interfacing with Bluetooth Low Energy (BLE) peripherals and IoT health sensors for healthcare and education clients.

FEATURED PROJECTS

AI Object Detection App (ML Kit & LiteRT / Google AI Edge)	2026
• Built a Jetpack Compose Android app for real-time on-device object detection using ML Kit and Google AI Edge LiteRT (SSD MobileNet) via CameraX. • Added support for switching between detection models at runtime and used a basic IoU-based tracking approach across frames to reduce bounding-box jitter.	
<i>Stack: Kotlin, Jetpack Compose, LiteRT (TFLite), ML Kit, CameraX, MVVM, Clean Architecture</i>	
RoPac — Offline Personal AI Assistant (Flutter + Python + Ollama)	2025–2026
• Personal project: an offline, privacy-first AI assistant using Flutter (macOS/Android) for the UI, a local Python bridge to Ollama for the LLM, and FAISS for vector search over ingested documents. • Added local speech recognition (Whisper.cpp) and text-to-speech (Piper), plus basic local authentication for the app.	
<i>Stack: Flutter, Python, Ollama, FAISS, Whisper.cpp, Piper TTS, RAG, MVVM</i>	
SecureVault — Cross-Platform Password Manager	2025
• Created an AES-encrypted local credential manager in Flutter with biometric authentication, secure clipboard cleaning, and zero cloud data exposure. Shipped on Android, iOS, and Web.	
<i>Stack: Flutter, Dart, SQLite, AES Encryption, Biometrics, Provider</i>	

EDUCATION

Bachelor of Computer Applications (BCA)	2019
<i>East West College, Bangalore University CGPA: 7.5</i>	
Higher Secondary (12th Science)	2012
<i>Hema Convent School, MP Board Score: 75%</i>	
High School (10th Science)	2010
<i>Hema Convent School, MP Board Score: 62%</i>
