

ROHIT PACHORI

Senior Android Developer (Native) | Kotlin • Jetpack Compose • MVVM/MVI • Clean Architecture

Bengaluru, India | +91-8277270451 | rpachori21@gmail.com | github.com/githubrohitgithub | linkedin.com/in/rohit-pachori | githubrohitgithub.github.io/portfolio

PROFESSIONAL SUMMARY

Senior Android Developer (SDE2/SDE3-level) with nearly 8 years building native Android applications in Kotlin and Jetpack Compose using MVVM, MVI, and Clean Architecture. Currently own core native and cross-platform modules of a self-service kiosk platform live across 400+ enterprise sites in 14+ countries for Compass Group. Deep expertise in Android architecture components (ViewModel, LiveData, StateFlow, Coroutines, WorkManager, Room, Navigation, Multi-module design), dependency injection (Dagger Hilt), unit/UI testing (JUnit, Espresso, Mockito), and performance tuning (ANR analysis, memory profiling, Crashlytics). Proven track record integrating hardware (BLE/IoT, thermal printers, barcode scanners) and payment SDKs (Pine Labs, Razorpay, FreedomPay) into production-grade native apps, plus leading architecture decisions and mentoring engineers through the Jetpack Compose migration.

TECHNICAL SKILLS

Languages: Kotlin, Java, Dart, XML, Groovy / Kotlin DSL

Android Native Stack: Jetpack Compose, XML Views, Hilt, ViewModel, LiveData, StateFlow/SharedFlow, Kotlin Coroutines & Flow, WorkManager, Navigation Component, Room, Data Binding, View Binding, Paging, Multi-module Architecture

Architecture & Patterns: Clean Architecture, MVVM, MVI, Repository Pattern, Dependency Injection (Dagger Hilt), Design Patterns, SOLID Principles, Abstraction, Provider, BLoC

Concurrency & Performance: Coroutines, RxJava, Multithreading, ANR Analysis, Memory Profiling, Crash Analysis (Crashlytics), Performance Profiling, ProGuard/R8

Testing & Quality: JUnit, Espresso, Mockito, TDD/BDD, Unit Testing, UI Testing, Code Review

Platforms: Android, Android/Google TV, iOS, macOS, Web

IoT & Hardware Integration: BLE/Bluetooth, Sunmi SDK, Zebra SDK, Bixolon, Thermal ESC/POS Printers, Barcode/QR Scanners

Payments: FreedomPay, Pine Labs, Razorpay, Payment Gateway Integration

Backend & Cloud: Firebase (Firestore, Realtime Database, Auth, Cloud Messaging/FCM, Crashlytics, Remote Config), REST APIs (Retrofit, Volley, Dio), SQLite

DevOps & Tools: Git, GitHub, CI/CD, Gradle, Play Console (release management, staged rollout), Agile/Scrum

Cross-Platform (secondary): Flutter, Dart, BLoC, Provider, GetIt

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Android (Native + Flutter)

May 2022 – Present

SmartQ (Bottle Lab Technology Pvt Ltd) — Bengaluru, India | Technology arm of Compass Group

- Architected the real-time listener system for live order-status and pending-count tracking across the kiosk platform using a single-listener Firebase pattern in native Android, cutting redundant data transfer while keeping all screens synchronized in real time.
- Deliver and maintain a self-service kiosk platform live across 400+ enterprise sites in 14+ countries (UK, Ireland, and more) supporting Compass Group cafeteria operations.
- Directed architecture decisions for the native Jetpack Compose migration, applying Clean Architecture and MVI patterns adopted as the team's implementation standard for new native modules.
- Lead ownership of two production applications — Token Display System (TDS) and Intelligent Menu Display (IMD) — deployed across 12+ countries (see Featured Projects).
- Designed the technical architecture of the meal-deal cart data model, resolving structural and data-integrity issues prior to implementation; the design became the team's reference architecture for the feature.
- Implemented payment gateway integrations (FreedomPay, Pine Labs) for contactless, card, and QR-based transactions, and integrated thermal printers (Sunmi, Zebra, Bixolon) and barcode/QR scanners via ESC/POS command handling.
- Built store closure automation logic and multi-region tax calculation handling in native Android to meet compliance requirements across supported countries.
- Led a native-to-Flutter migration for select modules that reduced maintenance overhead by roughly 40%, while retaining native Kotlin/Compose ownership for performance-critical and hardware-integrated modules.

Software Engineer — Native Android

August 2021 – April 2022

Cognitive Cloud Pvt Ltd — Bengaluru, India

- Developed secure, HIPAA-compliant native Android applications (Kotlin) with local data encryption and high-concurrency threading for real-time patient vitals processing.
- Implemented TDD protocols using JUnit and Mockito unit test suites, achieving a 25% reduction in post-launch crash rates.
- Conducted code reviews and enforced data integrity standards for sensitive healthcare data handling.

Software Engineer — Native Android

January 2019 – July 2021

Aislyn Technologies Pvt Ltd — Bengaluru, India

- Built Aislyn Learn App: native Android (Kotlin) edtech platform with 15+ paid course tracks, Razorpay checkout, Google Sign-In, and ExoPlayer video streaming.
- Engineered QR Smart Parking: native Android application with ZXing QR scanning, live slot tracking, prepaid wallet, and Retrofit-based REST API integration.
- Developed native Android applications interfacing with BLE peripherals and IoT health sensors for healthcare and education clients.
- Developed Dementia Care Companion (Aumetra): cross-platform (Flutter) application polling remote vitals (SpO2, BP) every 10 seconds via IoT health APIs, with condition-aware therapeutic audio.

FEATURED PROJECTS

Food Ordering Kiosk — Self-Service Campus Dining Platform (Native Android)

2024 – Present

- Built a self-service native Android (Kotlin, Jetpack Compose) kiosk application for campus dining supporting 50+ restaurant vendors, integrating receipt printers, barcode/ID scanners, and card payment terminals.
- Implemented meal-deal combo pricing, ID-based subsidy discounts, multi-provider payment processing, offline-first order handling with WorkManager, and German TSE/Fiskaly tax-compliant receipt generation.

Stack: Kotlin, Jetpack Compose, Firebase, Room, Hilt, WorkManager

TDS — Token Display System

2023 – 2025

- Built a multi-restaurant order display system for Android TV with real-time status updates and a remote-configurable banner/media system (video, image, Lottie) managed via the cloud.
- Architected BLoC state management (10+ specialized blocs) with Firebase Remote Config driving UI themes and country-specific settings without requiring app updates.

Stack: Flutter, Firebase Remote Config, BLoC, Hive, GetIt DI

IMD — Intelligent Menu Display

2023 – 2025

- Built a dynamic multi-restaurant menu carousel with timer-based automatic page rotation, syncing live pricing and availability via Firebase Realtime Database.
- Implemented Cubit-based dynamic theming, an auto-scrolling promotions engine, and Firebase-backed admin feature flags, with Hive-based offline fallback.

Stack: Flutter, Firebase (Realtime Database, Authentication, Crashlytics), Hive

RoPac — Offline Personal AI Assistant

2025 – 2026

- Built an offline, privacy-first AI assistant using Flutter for the UI, a local Python bridge to Ollama for the LLM, and FAISS for vector search over ingested documents.
- Added local speech recognition (Whisper.cpp) and text-to-speech (Piper), plus local authentication.

Stack: Flutter, Python, Ollama, FAISS, Whisper.cpp, Piper TTS, RAG, MVVM

SecureVault — Cross-Platform Password Manager

2025

- Built an AES-encrypted local credential manager in Flutter with biometric authentication, secure clipboard cleaning, and zero cloud data exposure, shipped on Android, iOS, and Web.

Stack: Flutter, Dart, SQLite, AES Encryption, Biometrics, Provider

EDUCATION

Bachelor of Computer Applications (BCA), 2019 — East West College, Bangalore University | CGPA: 7.5

Higher Secondary (12th Science), 2012 — Hema Convent School, MP Board | Score: 75%

High School (10th Science), 2010 — Hema Convent School, MP Board | Score: 62%
